BACKLOG REFINEMENT

GOAL:

Deliver a stable, reliable, and more intuitive app experience.

USER STORIES:

1. **Fix intermittent payment failure bug:** As a user, I would like the payment functionality to be fixed so that I can make transactions without problems.(Corregir) (Como usuario quiere pagar online, entonces la app no se buguea)

ACCEPTANCE CRITERIA:

- Notifications must be correctly received and displayed in the device's status bar whether the app is in the background or in a killed state (closed).
- Given the online payment functionality, when the user wants to pay for their purchase then, the transaction is completed successfully.

Type: Bug

PRIORITIZATION: Must Have

Story Points: 8

2. **Improve search bar accuracy:** As a user, I would like to be able to use a search bar in the application, to make it easier to navigate through it.

ACCEPTANCE CRITERIA:

- Given the app allows navigation through different pages, when the user wants to move from one page to another, then the navigation bar must be clearly displayed.

Type: Improvement

PRIORITIZATION: Must Have

Story Points: 3

3. **Create an onboarding tutorial for new users:** As an owner, I would like there to be a tutorial for new users, so that they can understand how to use the main functions of the application.

ACCEPTANCE CRITERIA:

- Given there is a new user, when the user logs into the app for the first time, then a very simple tutorial will appear to guide them through the first steps in the app.

BREAK DOWN ITEMS:

- Design and build welcome screen (step 1 of wizard).
- Build core features walkthrough screens (step 2 of wizard).
- Build call-to-action final step + "show only once" logic.

Type: Feature

PRIORITIZATION: Should Have

Story Points: 5

4. **Add push notifications:** As a user, I would like the application to have a notification system, so that I can continue to receive information from it even when it is closed or running in the background.

ACCEPTANCE CRITERIA:

- Given the app closes when not in use, then I will still receive notifications.

BREAK DOWN ITEMS:

- Set up Firebase Cloud Messaging (FCM) and APNs for iOS
- Build notification permissions and user preferences screen
- Create notification triggers from backend events

Type: Epic

PRIORITIZATION: Should Have

Story Points: 5

- 5. Redesign the user profile page:** As a user, I would like to be able to edit my profile to personalize my experience on the platform.

ACCEPTANCE CRITERIA:

- Given the app has a default theme, when the user wants to customize their own app, then there are options to change colors, size, and text style.

BREAK DOWN ITEMS:

- Update layout and visual design of profile screen
- Add edit functionality for all profile fields

Type: UX

PRIORITIZATION: Could Have

Story Points: 3

- 6. Add multi-language support:** As an international user, I would like to be able to change the language (Spanish-English) of the app to navigate it more comfortably.

ACCEPTANCE CRITERIA:

- Given a first-time user, when the app loads, then the interface must match the browser's default language.

BREAK DOWN ITEMS:

- Implement i18n system and translate UI elements
- Localize error messages
- Update email templates to support multiple languages

Type: Epic

PRIORITIZATION: Won't Have

Story Points: 5
